AMENDMENT

SIR:

In response to the Office Action mailed August 26, 2002 in the above-referenced application, the Applicants respectfully submit the following amendments and remarks.

IN THE CLAIMS:

Please amend the claims as follows:

1. (Thrice amended) A structure in which a plurality of electrical equipments are arranged in a motor vehicle, comprising:
an engine control computer, a relay block, a junction box, and an ABS actuator; and a vehicle body with a longitudinal centerline that defines a space including a generally centralized region as viewed in a direction of the width of the vehicle, said region extending symmetrically from both sides of the centerline for a distance which is no more than one-half the distance, measured in a direction normal to the centerline, between the centerline and a longitudinal axis of a brake booster disposed within the vehicle body,
wherein the engine control computer, relay block, junction box, and ABS actuator are concentrated in said generally central region of the space defined by the vehicle body.
